

"I hear and I forget. I see and I remember. I do and I understand."

Confucius

About

We're Buzzark Simulations and we've been building customized Virtual Reality and Augmented Reality simulations here in Chennai, Since 2018. We expertise in the circle of Virtual, Augmented and Mixed Reality enables us to develop creative and innovative solutions for your biggest challenges. Research and development are how we lead through the unsolved mysteries. Buzzark stands and strives for benchmark quality, customer-centric approach, robust engineering, which all has made us trusted for excellence.

Achievements

1. Pitchfest
2. M2D2
3. A-hub hackathon

VR

Virtual reality (VR) is a simulated experience that can be similar to or completely different from the real world. The principle of virtual reality e-learning is to impart, practice and check a user's knowledge using interactive scenarios and environments to reflect real-life situations.

AR

Augmented reality (AR) is an interactive experience of a real-world environment where the objects that reside in the real world are enhanced by computer-generated perceptual information. Through Augmented reality simulation we provide a truly interactive experience for the User to practice, explore, learn through the scenarios and environments

CUSTOMIZED PRODUCT DEVELOPMENT

Using our 3D technology, which we refer to as Real World Environments, we can create any environment or scenario. Users can move freely around the environment, interact with objects, carry out tests, make decisions and mistakes until they have mastered the subject. By letting learners practice in a virtual environment you will not only be able to see what they've learned but also they're approach and thought process to a problem.
